EDUCATION

Minerva University

Expected May 2029

B.S. Computational Sciences and Business (Data Science & Statistics and Strategic Finance)

San Francisco, CA

- Selected at a 2% acceptance rate to Minerva (#1 Most Innovative University, WURI); studying across a global rotation with students from 70+ countries
- Relevant Courses: Data Structures & Algorithms, Python Programming, Calculus, Linear Algebra

TECHNICAL SKILLS

- **Tools:** Python (pandas, NumPy, scikit-learn, XGBoost, networkx, matplotlib), SQL, Cypher, Neo4j, DuckDB, Claude API, Azure Data Lake, Next.js/React, Git/GitHub, Jupyter Notebook, Microsoft 365
- **Analytics:** graph analytics (PageRank, typology detection), feature engineering, imbalanced-data handling, model evaluation (PR-AUC, recall), temporal validation, EDA, ETL, data cleaning
- **Visualization:** Power BI (DAX), Power Query, Tableau, Excel

WORK EXPERIENCE

Minerva University

Sep. 2026 – Present

Cornerstone Civic Project, Teaching Assistant

Tokyo/Remote

- Guide 6 first-year teams through a year-long civic project, keeping them accountable to milestones, resolving team and partner conflicts, and connecting them to the right people and resources
- Research 5 civic partner organizations and write the project briefings that pair teams with Bay Area nonprofits

LACERA (Los Angeles County Employees Retirement Association)

Jun. 2026 – Aug. 2026

Project Management Office (PMO) Intern, Systems Division

Los Angeles, CA

- Built the Power Query ETL layer for division reporting, pulling case-level data from 3 curated Azure Data Lake datasets into 4 role-tailored Power BI dashboards
- Identified and fixed 50+ data-quality issues that were skewing dashboard KPIs, including a filter dropping 100+ records, numbers stored as text, and dates broken by a system migration
- Interviewed 15+ staff across 4 roles to map a 9-stage workflow, then presented bottleneck findings to division leadership and executives, including the CEO

PROJECT EXPERIENCE

AML Graph: Graph-Based Money-Laundering Detection | Python, Neo4j, Cypher | [GitHub](#)

- Modeled 5M bank transactions as a 422K account graph in Neo4j, wrote Cypher queries to find laundering typologies (fan-out, fan-in, cycles, mixing hubs), and improved detection PR-AUC ~5x by adding graph features

Credit Card Fraud Detection | Python, scikit-learn | [GitHub](#)

- Benchmarked 5 classifiers on 284K transactions (0.17% fraud) by PR-AUC (0.86), then threshold-tuned a random forest to catch 85% of fraud at 83% precision

ControlPoint: SOC 2 Type II Readiness Tool | Next.js, TypeScript, Claude API | [Demo](#) · [GitHub](#)

- Shipped a web app that scores a company's SOC 2 Type II compliance readiness by testing 55 security controls and flagging access conflicts across 62 employees, with an AI assistant that answers questions about the results

ADDITIONAL

- **Leadership:** Resident Assistant and member of the Finance & Investment Society, Minerva University
- **Certifications:** AML Fundamentals (Sumsub, CPD-accredited), Graph Data Science in Practice (Neo4j)
- **Languages:** English (fluent), Mongolian (native), Russian (fluent)
